## OTHER CONSIDERATIONS

The above feeding recommendations assume a horse is consuming a minimum of 1.5 to 2% of its body weight in hay or pasture.

Provide salt and plenty of fresh, clean water at all times. Keep product fresh in cool, dry storage. Examine product daily. DO NOT use if old, moldy or contaminated with insects.

1. One cellulase unit (CU) is defined as the amount of activity that will produce a relative fluidity change of 1 (determined with a calibrated viscometer) in 5 minutes in a defined carboxymethylcellulose substrate at pH 4.5 and 40°C.

2. One hemoglobin unit (HUT) of proteolytic (protease) activity is defined as that amount of enzyme that produces, in one minute under the specified conditions, a hydrolysate whose absorbance at 275nm is the same as that of a solution containing 1.10g per mL of tyrosine in 0.006N hydrochloric acid. Estimated values determined by Equi-Analytical, Ithaca, NY.

3. Assuming a horse is consuming a minimum of 1.5 to 2% of its body weight in hay or pasture.

4. The feeding recommendations provide for appropriate vitamin/mineral fortification according to body weight. For desired body condition, adjust grain inclusion (oats, corn, barley) to provide additional calories.
