1. One cellulase unit (CU) is defined as the amount of activity that will produce a relative fluidity change of 1 (determined with a calibrated viscometer) in 5 minutes in a defined carboxymethylcellulose substrate at pH 4.5 and 40°C.

2. One hemoglobin unit (HUT) of proteolytic (protease) activity is defined as that amount of enzyme that produces, in one minute under the specified conditions, a hydrolysate whose absorbance at 275nm is the same as that of a solution containing 110g per mL of tyrosine in 0.006N hydrochloric acid. Estimated values determined by Equi-Analytical, Ithaca, NY.

FEEDING DIRECTIONS

Feeding recommendations are based on average daily requirements. Horse's needs may vary based on age, work level, metabolism, weather and other factors.

Adjust the amount of Triple Crown Senior Gold up or down as needed to maintain desired body condition. If feeding less than the recommended amount per day, supplement with a Triple Crown balancer feed.

Do not feed more than 0.50% of the horse's body weight of Triple Crown Senior Gold in a single meal, and if feeding that amount, allow 3 to 4 hours between meals.

Adding water to Triple Crown Senior Gold will make an EZ Mash for horses with poor teeth, respiratory problems, or for horses prone to choking. Add water 10 to 15 minutes prior to feeding at an amount to meet the desires of the individual horse.

NOTE: Provide salt and plenty of fresh, clean water at all times. Keep product fresh in cool, dry storage. Examine product daily. DO NOT use if old, moldy or contaminated with insects.

CAUTION: Follow label directions. Chromium supplementation should not exceed 4 mg per day. Product contains Copper; do not feed to sheep.
