

SENIOR

TEXTURED

50 LBS
(22.7 KG)

IDEAL FOR:

Mature horses, performance horses, underweight horses

FEATURES:

Whole grain free, high fat & fiber, low starch & sugar

HELPS SUPPORT:

Metabolic disease, poor teeth, ulcers

Developed specifically for older horses, Triple Crown Senior features a beet pulp-based formula with higher nutrient and fat content to provide the digestive assistance and calories older horses require to maintain good body condition. This feed can be mixed with water to form a mash for horses that have difficulty chewing and swallowing and has enough bulk fiber to be used as a sole ration for horses unable to eat hay or pasture. It is ideal for horses of any age needing additional fiber and lower starch and sugar levels.

FEEDING DIRECTIONS

IF YOUR HORSE CAN EAT HAY

500 – 600 lb. pony	4 lb. per day
1,000 – 1,100 lb. horse	6 lb. per day

IF YOUR HORSE CANNOT EAT HAY

500 – 600 lb. pony	7 lb. per day
1,000 – 1,100 lb. horse	12 lb. per day

OTHER CONSIDERATIONS

If feeding less than 6 lb. per day (per 1,000 lb. of body weight) in combination with hay, supplement with 1 lb. per day of Triple Crown Balancer or Triple Crown Balancer Gold in order to meet recommended levels of vitamins, minerals and digestive support.

If your horse cannot eat hay, be sure to feed 1 to 2% of body weight daily.

Adjust the amount of Triple Crown Senior up or down as needed after 2 to 4 weeks to maintain desired body condition. Do not feed more than 5 lb. at a single meal (3 lb. for ponies). Allow 3 to 4 hours between meals.

Provide salt and plenty of fresh, clean water at all times. Keep product fresh in cool, dry storage. Examine product daily. DO NOT use if old, moldy or contaminated with insects.

1. One cellulase unit (CU) is defined as the amount of activity that will produce a relative fluidity change of 1 (determined with a calibrated viscometer) in 5 minutes in a defined carboxymethylcellulose substrate at pH 4.5 and 40°C.

2. One hemoglobin unit (HUT) of proteolytic (protease) activity is defined as that amount of enzyme that produces, in one minute under the specified conditions, a hydrolysate whose absorbance at 275nm is the same as that of a solution containing 1.10g per mL of tyrosine in 0.006N hydrochloric acid.
